Digestive Enzyme Supplements for EPI

## Common Dry Dog Foods for Dogs with EPI

EPI researchers suggest a low fiber diet (below 4%) that is usually grain free. (Older research suggested that fat should be restricted at below 12% while current research suggests normal amounts of fat) Some dogs will be able to tolerate more fiber than others (or more fat) and some may do well with some grains. This list was compiled via the help of our enzyme users it is to be used for reference only. We are not endorsing any product and there are others out there that work well too.
